

# Training on GHG Emission Inventory

( ISO 14064, Carbon Footprint)

Climate change is recognized as a significant manmade global environmental challenge and if timely actions are not taken then it will continue to influence our world for generations to come. Increasingly, companies are making efforts to understand and manage their GHG opportunities and risks in order to ensure long-term success in a competitive business environment. ISO 14064 is an international standard which provides guidance for Developing GHG emission Inventories. GHG emission inventory provides Business with information that can be used to build an effective strategy to manage and reduce GHG emissions. It helps in building stakeholder trust and Reinforces Commitment towards Responsible Business.

## Course Structure

The course has been designed to cover requirements of ISO 14064-1 standard. It include combination of tutored sessions, case studies, exercises and discussions. The topics covered during the course include Design and Development of Greenhouse Gas Emission Inventory, Quantification of GHG emissions and preparation of GHG emission inventory report. The course will also briefly cover requirements for Companies to become Carbon Neutral as per PAS 2060:2014.

## Who Should Participate?

The training is aimed at a varied audience including Climate Change and environmental consultants, Sustainability Managers, Energy Managers and officials involved in companies aiming to prepare Sustainability reports, manage energy consumption, track GHG emissions and implement Carbon accounting.

## Fees

The fees for this course is INR 5,000/- + GST (as per Government of India norms) per participant.

**Dates :** 21<sup>st</sup> April, 2018

**Venue:** Hotel Radisson Blu, Dwarka, New Delhi

## About Us

EnvironmentFirst Energy Services (P) Limited is specialized advisory, training and Engineering company that provides advisory services in Climate Change, Sustainability, Integrated Management Systems and Renewable Energy. We facilitate organizations manage Greenhouse gas emissions leading to improved governance around climate change related risks and opportunities. Our team of experts with specialized industry knowledge and practical approach provide value added services to the clients.

## BENEFITS OF GHG EMISSION INVENTORY

- Provides Business with information that can be used to build an effective strategy to manage and reduce GHG emissions;
- Reducing GHG emissions results in reduced energy usage and cost savings
